In reply to Craig Giglio94760:

It appears there may be an entry to the registry that is getting set that is preventing debug. That would explain why only re-installing Windows was fixing the problem. In the Windows registry search for an entry:

HKEY_CURRENT_USER\Software\Microsoft\Windows NT\CurrentVersion\AppCompatFlags\Layers

If there is an entry similar to the following:

```
C:\Keil\UV4\UV4.exe REG_SZ $ IgnoreFreeLibrary<lmidk-agdi.dll>
```

Remove the entry. Reboot and retry the debug session.

Hope that helps.
